

VX-31

DUST DEVIL - Air Test Evaluation Squadron Three One - Naval Air Warfare Center Weapons Division, China Lake, CA.

THE DUST DEVIL MISSION

What We Do:

- Test and evaluate current and future manned and unmanned aircraft, weapons, and weapons systems.
- Operate the Airborne Test Bed program to provide cost-wise support for the Navy's research community.
- Conduct successful inland search and rescue operations throughout the high desert.

VX-31 COMMAND PHILOSOPHY

How We Do It:

- Conduct ourselves with integrity and professionalism in all that we do.
- Possess a relentless drive to be the most effective and efficient flight test organization possible.
- Prioritize our families. Nothing done here is possible without their support. They need yours, too!
- Execute safe flight tests. Management of risk in flight tests is critical.
- Communicate to your sponsors and to your chain of command in a timely manner. We can not effect change if we keep secrets.
- Be experts in our jobs. Given the complexity and costs in performing our mission, it would be irresponsible not to be.

Brady Bartosh, CDR USN
Commanding Officer, VX-31
